NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-369 and 50-370]

Duke Power Company, et al., McGuire Nuclear Station, Unit Nos. 1 and 2; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. NPF-9 and NPF-17, issued to Duke Power Company (the licensee), for operation of the McGuire Nuclear Station, Units 1 and 2, located in Mecklenburg County, North Carolina.

Environmental Assessment

Identification of the Proposed Action

The proposed action would change the Technical Specifications (TS) to (a) allow the maximum enrichment for fuel stored in the fuel pools to increase from a nominal value of 4.0 to 5.0 weight percent Uranium-235, (b) establish new loading patterns for new and irradiated fuel in the spent fuel pool to accommodate this increase, (c) add a TS to establish a limit for boron concentration for all modes of operation, (d) add BASES to correspond to the TS that were added, (e) add TS to reflect limits for fuel storage criticality analysis, and (f) reformat the TS to bring them more in line with the standard format in the NRC report NUREG-1431, "Standard Technical Specifications Westinghouse Plants."

The proposed action is in accordance with the licensee's application for amendment dated June 13, 1994, as supplemented by letters dated August 15, 1994, March 23 and April 18, 1995.

The Need for the Proposed Action

The proposed action is needed so that the licensee can use higher fuel enrichment to provide additional flexibility in the licensee's reload design efforts and to increase the efficiency of fuel storage cell use in the spent fuel pools.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revisions to the TS. The proposed revisions would permit storage of fuel enriched to a nominal 5.0 weight percent Uranium-235. The safety considerations associated with storing new and spent fuel of a higher enrichment have been evaluated by the NRC staff. The staff has concluded that such changes would not adversely affect plant safety. The
